Single Sign-on for Copado

SSO [Single Sign-On] is enabled for both Copado's Training environment and Production environment. All the current users should now be able to login through SSO. With SSO enabled now, we have changed our on-boarding process a little bit. Going forward, if any new user needs to be assigned license for either Training or Prod, he will need to request access to respective AD group. Once Access request is complete, then they can proceed with raising a ticket with E3 to have a Copado user created and the license assigned. Below are the details of the AD group.

Training Environment: G_Azure_Copado_Training
Production Environment: G_Azure_Copado_Prod

Please find the links for signing in through SSO:
