Copado | adding metadata to source code format

KB0135254 • 4 Views • Published: June 1, 2023

Issue:

Secapi scan failed with error - No metadata source format mapping was found for: EmailServicesFunction

Solution:

Add the metadata EmailServicesFunction to source code format and restart the secapi scan

navigate to setup - custom metadata Types - source code format mapping - manage source code formatting - click new

Source Code Format Mapping Detail					
Label	EmailServicesFunction				
Source Code Format Mapping Name	metadata_EmailServicesFunction				
Format	Metadata				
Folder Path	emailservices				
File Extension	.xml				
Created By	Copado Integration, 5/25/2023 2:15 PM				

update the fields as below and save it,

Label - Enter the metadata name

Source code format mapping name - update as metadata_metadataname

format - metadata

folder path - select the folder name from ADO Repo for that metadata

File extension - select the file extension from the ADO Repo folder for that metadata
