

COPADO | SYNC AZURE BOARD VALUE TO COPADO

KB0100260 - Latest Version

☆☆☆☆ 4 views

REFERENCE: KB0100260 (https://humanaprod.service-now.com/kb_view.do?sysparm_article=KB0100260).

The document provides steps on SYNC AZURE BOARD VALUE TO COPADO

Sync Azure Board Value to Copado

Problem Statement: DevOps teams performs multiple manual steps on Azure and Copado to get the list of User stories that are "SIT Testing Done" or "UAT Testing Done", signaling work units that are ready for deployment to the next Org.

Agenda: Create a field on Copado User story "Azure Board Column Name" that will get the latest value of "Board column" from Azure for the specific User story.

The field will get its value via the nightly User story sync (11pm EST) batch job or when the Release manger clicks on "Sync External User stories" button on the specific project.

Additionally, once the Copado field has "SIT Testing Done" or "UAT Testing Done" value, the "Ready to Promote" checkbox on the user story should be automatically checked so that DevOps team can get the list of User Stories that are ready for Promotion.

Components:

Type	Name	Object	New/Update
Process Builder	Copado User Story - update Ready to Promote	<u>copado__User Story__c</u>	New
Custom Formula Field	Azure Board Column Name	<u>copado__User Story__c</u>	New
Custom Field	<u>Azure Board Column__c</u>	<u>copado__User Story__c</u>	New
Custom Field	<u>is Testing Done__c</u>	<u>copado__User Story__c</u>	New

Pre-requisites

N/A

Pre-Deployment steps Add the field "Record Type" on List views and Related List so users can differentiate Bug and User stories

1) Go to User Story List Views -> Edit List view column -> Add the Record Type field beside Status and save it. 2) Go to Setup -> Object Manager -> Project (copado __Project __c) -> Page Layout -> Edit Layout -> Go to Related List -> Click the Wrench Icon on User Story -> Add the Record Type field and save it.

Deployment Section:

1) Commit all the technical components as mentioned in the components section.

2) Make changes to Field mapping for all the Projects using this feature. Need to add few fields to the Field Mapping.

- 1) Azure_Board_Column__c (Check the checkbox "Exclude from Third party up date")
- 2) is_testing_done__c (Check the checkbox "Exclude from Third party updat e")

NOTE: Field values for mapping were provided by Jeremy Thiede for Azure Test environment testing. Please get the latest values from Azure PROD for Field mapping in Production.
