## **Work Experience**

### **Project:-**

**Client** : **Cisco**  
**Role** : **Salesforce DevOps**  
**Duration** : **Jun 2023 - till now**

### **Responsibilities** :

- Implemented and optimized CI/CD pipelines using Copado, Git, and Jenkins, automating deployments and improving release cycle efficiency.
- Led production deployments, conflict resolution, and back-promotion of changes across multiple environments (Dev, UAT, PROD).
- Monitored and managed Salesforce sandbox environments, ensuring security, stability, and seamless refresh strategies.
- Enforced DevOps best practices, including version control, branching strategies, and automated testing frameworks.
- Collaborated with development, QA, and business teams to align release schedules with project timelines.
- Identified and resolved metadata conflicts, package installation failures, and deployment-related issues.
- Created automated release notes and documentation, keeping stakeholders informed about deployment updates.

### **Project:-**

**Client** : **SITEL**  
**Role** : **Salesforce DevOps/Release Engineer**  
**Duration** : **Dec 2021 –Jun 2023**

### **Responsibilities:**

- Designed and maintained CI/CD pipelines in Flosum, ensuring automated deployments with zero downtime.
- Implemented Git branching strategies, managing merge conflicts and enforcing version control policies.
- Executed sandbox refreshes, ensuring environment consistency for testing and production deployments.
- Analyzed user stories for deployment readiness across DEV, UAT, and Production environments.
- Developed release management documentation, providing clear guidance for deployment schedules and compliance.
- Ensured high test class coverage, maintaining Salesforce coding standards and best practices.
