

Objective

As a certified Salesforce Copado Release Engineer with 3 years of experience in implementing CI/CD pipelines, release management, and deployment automation using tools like Copado, Git and proficient in Salesforce Administration including metadata deployment and troubleshooting deployment issues. Recognized for driving efficient error free releases and delivering client focused solution across global projects.

Work Experience

- ◆ Current Organization: Tata Consultancy Services 2021 to Present
Designation: System Engineer

Project1:

Client: Jaguar Land Rover

Role: Salesforce Release Manager

Roles and Responsibilities:

- Successfully deployed code from lower environments (SIT, UAT) to higher environments (PROD), ensuring smooth transitions and minimal disruptions.
- Automated back promotions from higher to lower environments to maintain synchronization across all orgs.
- Expert in troubleshooting Copado deployment issues, ensuring quick and efficient resolution of problems.
- Configured Copado pipelines by adding and removing salesforce environments to the pipeline.
- Proficient in comparing metadata components in GIT branches and modifying changes as needed to keep the codebase accurate and up to date.
- Proficient in understanding the functional and technical requirements of applications in salesforce
- Facilitated Copado access for new users, ensuring smooth onboarding and integration into the development process.
- Managed sandbox refreshes and post-refresh activities to ensure environments are ready for development and testing.
- Good in Copado CLI and GIT commands to deploy components
- Worked on change management process.
- Planned and managed release and environment usage, including sandbox planning, metadata and data migration, environment comparisons, and version control.
- Collaborated and managed the deployment process across all functions within product owners, stakeholders and development teams.
- Worked on functionalities like data rollback and implementing destructive changes in Copado.
- Performed administrative tasks such as user management, security management, data management, and other tasks based on developers' requirements.

Project 2:

Client: Amgen (Biotechnology)

Role: Salesforce Administrator

Roles and Responsibilities:

- Manage user accounts, roles, profiles, and permissions to ensure appropriate access and security.
- Customize and configure Salesforce to meet organizational needs, including setting up custom objects, fields, Records, debugging, licenses management in the org.

- Maintain data quality by importing, exporting, and cleaning data.
- Efficiently managed and resolved salesforce related issues by leveraging servicenow for incident tracking and resolution
- Plan and implement Salesforce system upgrades and patches to ensure the platform runs smoothly.
- Provide technical support to users, troubleshoot issues, and ensure optimal system performance.
- Work closely with stakeholders to gather requirements, provide solutions, and ensure Salesforce aligns with business goals.
- Develop and implement change management processes to manage changes and updates to the Salesforce platform.

Education

- SVR Engineering College, JNTUA
 - Bachelor of Technology (B.Tech)
- 2021

Skills And Tools

- Copado tool
- Salesforce Administrator
- Confluence Page
- GitLab/GitHub
- Change Management
- Release Management
- Workbench
- Data Loader
- Reporting and Documentation
- ServiceNow

Certifications

- Salesforce Administrator
- Copado Fundamentals I
- Copado Fundamentals II

Awards And Achievements

- Achieved appreciation from the client towards my outstanding effort and support.
